REACT ASSIGNMENT

1) Parse an excel file of given format - parse_test_sheet_format
2) Show this to user in a list view

mobile	id	earning	action
8888888888	1	1000	Approve | Reject
9999999999	2	500	Approve | Reject

3) User can approve individual row or user can select multiple rows and then approve
4) User can reject only one row with some remark. On reject click user can enter a remark why did he rejected
5) On verify console log row data in array of object format

        Eg - a) on one row or multiple approve rows -

```
[{
        mobile: "8888888888",
        id: 1,
        earning: 100,
        action: "approve"
},
{
        mobile: "8888888888",
        Id: 1,
        earning: 100,
        action: "approve"
}]
```

        b) on reject log -

```
[{
        mobile: "8888888888",
        id: 1,
        earning: 100,
        action: "reject",
        remark: "Wrong earning"
}]
```

Note: 1) Use only ReactJS

    2) You can create your own view from user ease perspective.
